DRYWALL GRID SYSTEM

FRAMEALL™

Armstrong®
World Industries

FLAT-OUT BETTER

FRAMEALL™ DRYWALL GRID

FrameAll™ Drywall Grid eliminates the labor-intensive cutting, tying, and spacing of track and channel framing. Our systems are engineered with rout locations and cross tees to maintain precise module spacing. Main beams have 51 routs, 8" O.C. and varying cross tee lengths to accommodate diffusers and fixtures of all types without field modifications or accessories.

The FrameAll Drywall Grid family of products is manufactured to meet or exceed ASTM Standards and code requirements. They are engineered to carry 7-14+ lbs per square foot and to provide faster, easier, better alternatives to stud and track construction.

The vertical load carrying capacity for main beam and cross tee members is determined in accordance with ASTM test method E3090. Suspended ceiling systems constructed of screw-attached gypsum board panels may be installed in accordance with ASTM C1858 and are exempt from code prescribed requirements of acoustical or lay-in panel ceilings. This standard practice is limited to framing that supports a single level ceiling and is surrounded by, and attached to, laterally braced walls or soffits.

CODE COMPLIANCE YOU CAN TRUST

Meets:

- ASTM C1858
- ASTM C635
- ASTM C645
- ASTM C754
- ASTM C840
- ASTM E3090
- ICC Evaluation Service Report ESR-1289
- City of LA – RR 25348
- IBC categories D, E, and F single layer drywall ceilings are exempt from lateral force bracing requirements, regardless of room size
- Miami-Dade County, Florida wind uplift – NOA No. 19-0911.08 – 03/17/2021
- Miami-Dade County, Florida impact testing – NOA No. 19-0911.02 – 10/07/2020
- Consult local codes for specific requirements

PERFORMANCE (cont...)

- PeakForm® profile increases strength and stability for improved performance during installation
- XL® (staked-on end detail) cross tees provide secure locked connection; fast and easy to install
- SuperLock™ main beam clip is engineered for a strong, secure connection and fast accurate alignment confirmed with an audible click; easy to remove and relocate

Flat Drywall Grid Installation

TABLE OF CONTENTS

(...cont.) PERFORMANCE

- Knurled Ridges on cross tees for speed of screw insertion during board installation
- ScrewStop™ reverse hem prevents screw spinoff on 1-1/2" wide face
- Rotary-stitched – Greater torsional strength and stability
- 1-1/2" wide face main beams and cross tees – Easy installation of screw-applied gypsum wallboard
- G40 hot-dipped galvanized coating – Corrosion resistance per ASTM C645
- G90 hot-dipped galvanized coating – Superior corrosion resistance for exterior applications per ASTM A653
- Heavy-duty load rating – Minimum 16 Lbs/LF on main beams
- Fire Rated – Applicable to 25 UL® Fire Resistant designs (D501, D502, G523, G524, G527, G528, G529, G553, J502, L502, L508, L513, L515, L525, L526, L529, L564, P501, P506, P507, P508, P509, P510, P513, P514, P516)
- Wind uplift and impact-tested; Engineered assemblies available for up to 172 MPH for Miami Dade/Broward County, Florida
- Cross tee spacing: 16" or 24" O.C. for 5/8" drywall 16" O.C. for 1/2" drywall
- Sourced and manufactured in the USA

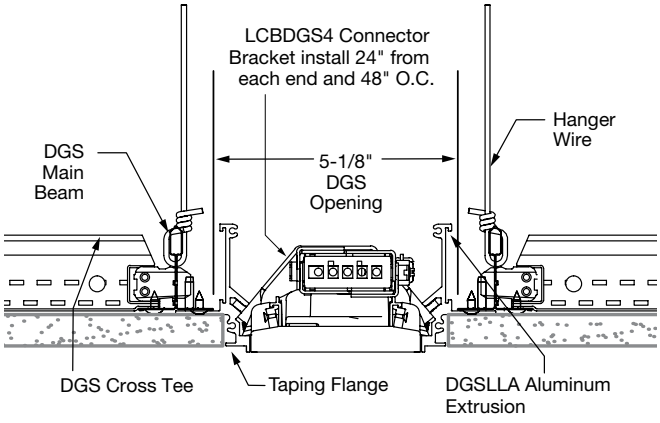
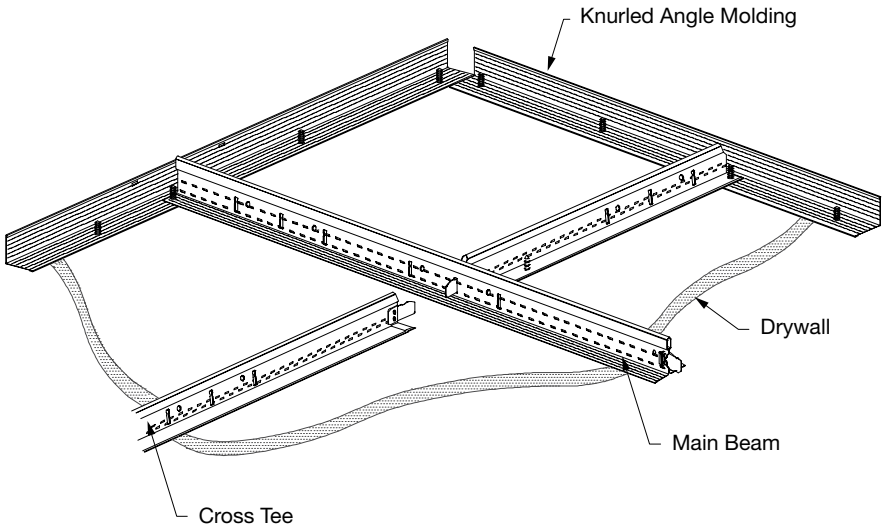
DGSLLTKCON	120" Continuous Linear Light Trim Kit	120"

NOTE: Linear Light Trim Kits designed to work with 5/8" drywall



HANGING & FRAMING

The grid system is comprised of main beams and cross tees that are typically suspended by hanger wires to the structural deck. Sections of main beams lock together end-to-end while cross tees span between the main beams. The ends of the main beams and cross tees rest on the angle molding that run around the perimeter of the space.



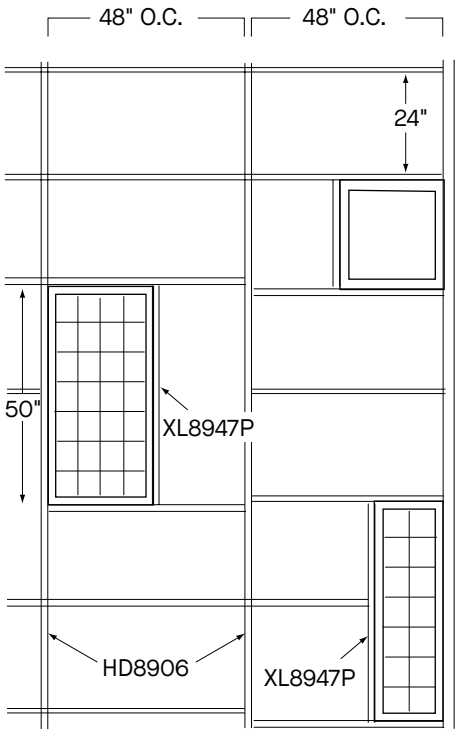
HANGING & FRAMING

Type F fixtures, access panels, and air diffusers require a full 12", 24", or 48" opening dimension. The Armstrong® Drywall Grid System main beams and cross tees have additional routs in the web to accommodate this larger opening for Type F fixtures.

Using our 14", 26", 50", and 72" cross tees, Type F fixtures fit perfectly without field cutting or special accessories.

When installing Type F fixtures parallel to the main beams, use a 48" cross tee for easy placement of fixtures without field modifications.

Main Beams



When installing fixtures perpendicular to the main beams, use 72" cross tees for virtually limitless fixture placement.

Cement Siding 5/8"*	1.9
Hard Board Siding 1/2"	2.0
Water-Resistant Gypsum Board 5/8"	3.42
Water-Resistant Gypsum Board 1/2"	2.8
Expanded Steel Lath	3.4
12-gauge Sheet Steel	4.5

NOTES: All framing on the exterior should be 16" O.C. or less.
Some manufacturers make 1/2" gypsum board with special core to span 24" framing on interior ceiling installations (available on request). All steel product on exterior made from G90 galvanized finish.
* Use lower RPM (1,000-2,500) screw gun to install cement board screws with intermittent pressure.

HANGING & FRAMING

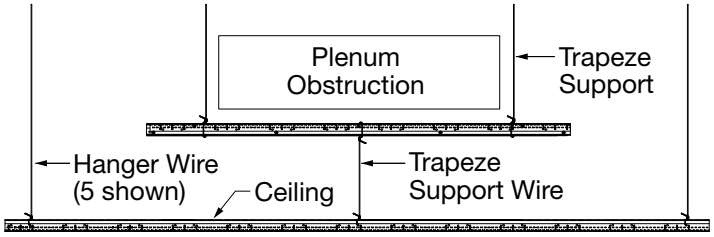
Trapeze load support solutions offer calculated and resourceful solutions for supporting hanger wires under plenum obstructions using scrap material contractors already have on their jobsite.

Table A	Trapeze Span (ft.)				
SINGLE MEMBER PLENUM TRAPEZE	**4'**	**5'**	**6'**	**7'**	**8'**
Acoustical Grid	**Allowable Midspan Point Load (lb.)**				
730145 – Prelude® Max Main Beam **(Fig. 2)**	80	50	30	20	–
HD* Main Beam – 7300, 7500, 7600, 6100 **(Fig. 3)**	32	20	–	–	–
ID* Main Beam – 7301, 7501, 7601, 6101 **(Fig. 3)**	24	–	–	–	–
	Drywall Grid (See Fig. 3)				
S7708 – ShortSpan®	44	28	–	–	–
HD8906 – Main Beam	36	23	–	–	–
XL8965 – Cross Tee	28	–	–	–	–

Table B	Trapeze Span (ft.)				
NESTED COMPOSITE MEMBERS; SCREW ATTACHED	**4'**	**5'**	**6'**	**7'**	**8'**
Drywall Grid System Nested (Fig. 4)	**Allowable Midspan Load (lb.)**				
HD8906 – Main Beam	–	–	51	37	28
S7708 – ShortSpan	–	–	61	44	34

* Duty classification determined by performance and testing specifications of ASTM C635.

Fig. 1



NOTE: Referencing Table A, a 4 ft. span of 7301 Main Beam used as a "Trapeze Support" can carry a mid-span point load of 32 lbs. If the "Trapeze Support Wire" **(Fig. 1)** is supporting a ceiling area of 16 sq-ft. (4-ft. main spacing × 4-ft. hanger wire spacing), the maximum allowable uniform weight of the ceiling is 2 lb./sq-ft. (32 lb. ÷ 16 sq-ft. = 2 lb./sq-ft.)

SINGLE MEMBER TRAPEZING:

HANGING & FRAMING

A suspended ceiling not only carries the load of the applied finish, but can also act as a load-carrying structure or membrane that supports another ceiling at a lower level. The DDC clip is used at hanger wire locations to allow for connecting the second and even third ceiling. This method of hanging and framing is used in multi-layer ceilings with long vertical drops – eliminating the use of long stud drops.

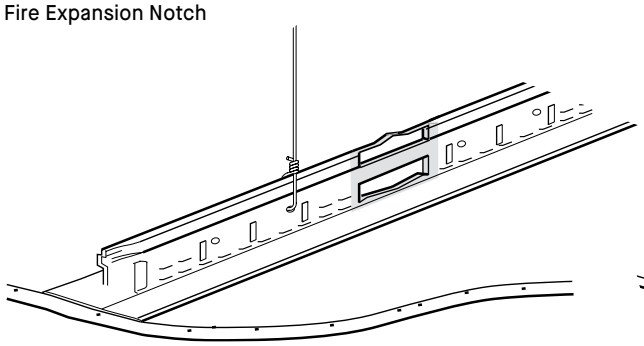
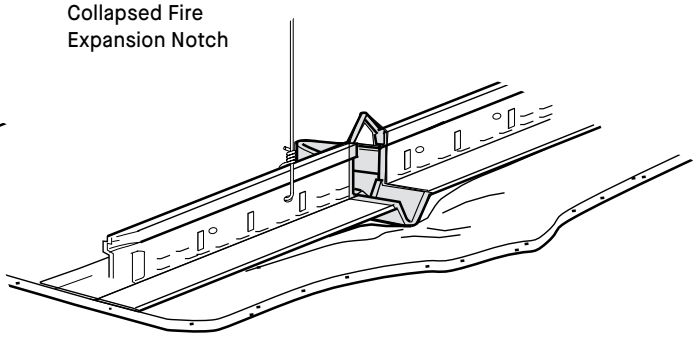
Armstrong® Drywall "Design To Fit" Items XL7936G90 and XL8965 cannot be used as part of a UL Fire Resistive Design.
DFR 8000 – UL Designation, Fire Guard™ Drywall Grid System.
For fire-rated assemblies, use Type C gypsum board as noted in the UL fire-rated assembly designs.

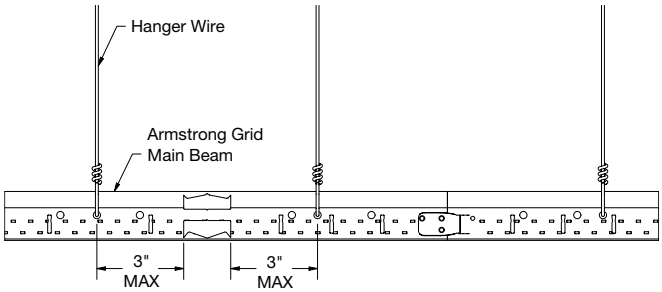
FIRE RATED EXPANSION JOINT

Fire Expansion Notch



Collapsed Fire Expansion Notch





NOTE: When installing fire rated main beams, all fire expansion relief cut outs must have a hanger wire within three inches (ASTM C636)

SEISMIC INSTALLATIONS

Scope: ASTM C-1858

This recommendation applies to the installation requirements of direct-hung Armstrong® Drywall Grid ceiling systems, receiving flat, single-level gypsum panel products surrounded on all sides by a wall, bulkhead, or soffit braced to the building structure to resist the effects of earthquake ground motions.

DGS Seismic Installation Components/Conditions	Category A, B	Category C	Category D, E, & F
Hanger wire	12 ga.	12 ga.	12 ga.
Hanger wire spacing on main beams	48" O.C.	48" O.C.	48" O.C.
Hanger wire plumb	1' in 6', or add counter splayed wire	1' in 6', or add counter splayed wire	1' or 6' or add counter splayed wire
Vertical hanger wires on main beams at perimeter wall	No more than 24"	No more than 24"	No more than 24"
Hanger wire wraps	3 within 3"	3 within 3"	3 within 3"
Substitute hanger wire for galvanized sheet metal or clips designed for hanging	Allowed	Allowed	Allowed
Terminal grid ends screwed to wall angle/channel	Required	Required	Required
Seismic separation joints	Not required	Not required	Not required
Perimeter wires on tees within 8" of wall angle	Not required	Not required	Not required
Minimum spacing between main beam/tee ends and wall molding	Not required	Not required	Not required
Spacing Bars/BERC clips on perimeter tees/main beams	Not required	Not required	Not required
Armstrong KAM/LAM face widths	1-1/4" Minimum	1-1/4" Minimum	1-1/4" Minimum
Seismic restraint splay wire pods or rigid bracing	Not required	Not required	Not required
Compression posts	Not required	Not required	Not required

Control Joint Notes:
General industry guidance to reduce cracking of drywall

Interior ceiling applications	Maximum dimension in any direction	Maximum square feet
With perimeter relief	50 LF	2,500 SF
Without perimeter relief	30 LF	900 SF
Exterior ceiling applications	30 LF	900 SF
Drywall control joints	As required by drywall manufacturer	As required by drywall manufacturer

HANGING & FRAMING

The International Building Code (Section 1206) provides guidelines to ensure that construction meets suitable sound isolation performance. These guidelines are used for commercial and multiple-family buildings such as: offices, apartments, hospitals, dormitories, schools, hotels, condominiums, and mixed-use buildings.

The IBC uses two sound classes to make sure these guidelines are met: Sound Transmission Class (STC) – sound transmitted through the air such as voices and music and Impact Insulation Class (IIC) – sound transmitted through the building structure such as foot traffic and objects dropped on the floor.

A rating of 50 or above for both STC and IIC sound tests will satisfy the IBC's minimum requirements, with one or two layers of drywall using Armstrong® Drywall Grid.

Understanding Sound Control Ratings

STC/IIC Ratings	Description
60	Superior soundproofing
55	Excellent
50	Loud speech barely audible
45	Some loud speech audible – not understood
30	Loud speech audible – well understood
25	Regular speech audible and understood through walls

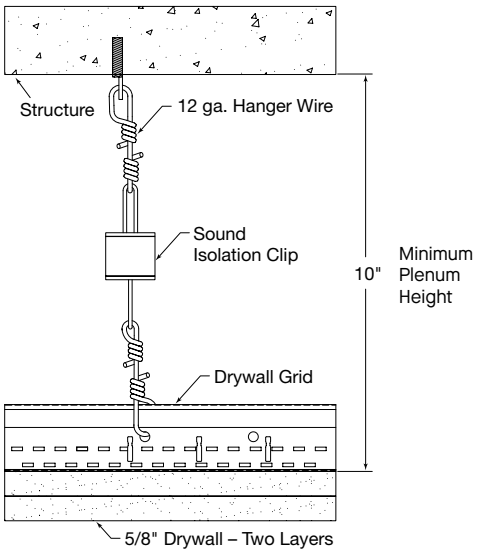
Changes in STC/IIC Ratings	Description
+ / - 1	Almost perceptible
+ / - 3	Just perceptible
+ / - 5	Clearly Perceptible
+ / - 10	Twice (or half) as loud

WHY CHOOSE ARMSTRONG® DRYWALL GRID SOUND ISOLATION SOLUTIONS?

- Easier to detail, specify, and 50% faster to build than traditional stud and track
- Armstrong Drywall Grid-tested assemblies provide proven results and piece of mind

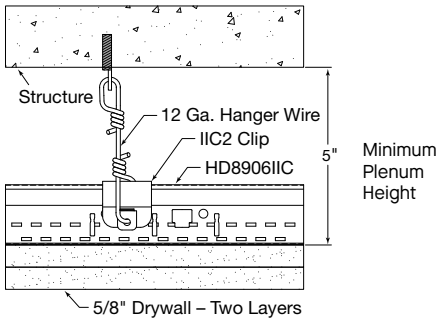
TRADITIONAL METHOD

IIC Solution

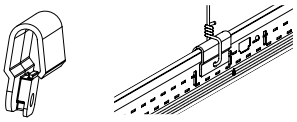


ARMSTRONG SOLUTION

IIC Solution

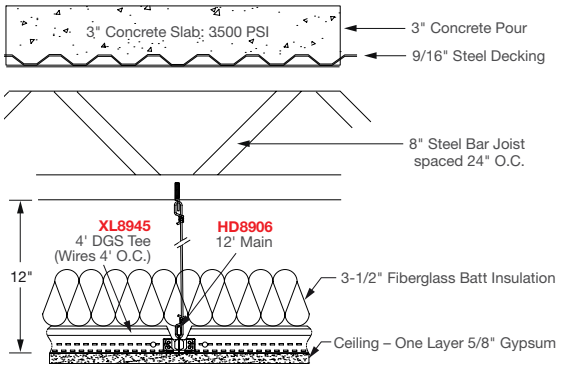


IIC isolator shown with the HD806IIC main



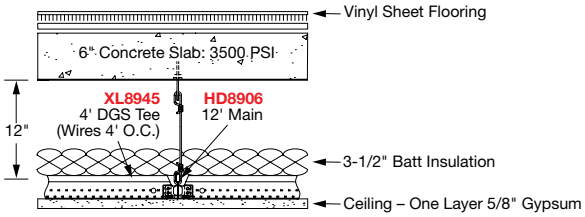
ARMSTRONG STANDARD DRYWALL GRID ASSEMBLIES – ONE LAYER OF DRYWALL

Assembly 1



Item No.	Traditional Assembly	Building Structure	STC	ICC
HD8906 XL8945	12' Main Beam / 4' Cross Tee 3-1/2" Batt Insulation 5/8" Gypsum	Bare Concrete Base 3" Concrete Slab Fluted Steel Decking 8" Bar Joist, 24" O.C.	55	47

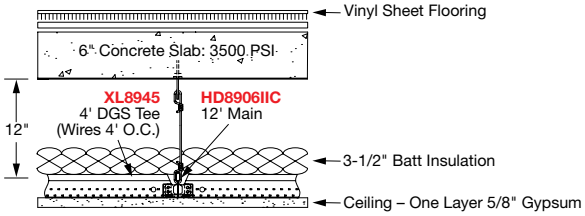
Assembly 2



Item No.	Traditional Assembly	Building Structure	STC	ICC
HD8906 XL8945	12' Main Beam / 4' Cross Tee 3-1/2" Batt Insulation 5/8" Gypsum	6" Thick Slab Concrete Base with Vinyl Sheet Flooring	57	58

ARMSTRONG IIC SOLUTION ASSEMBLIES – ONE LAYER OF DRYWALL

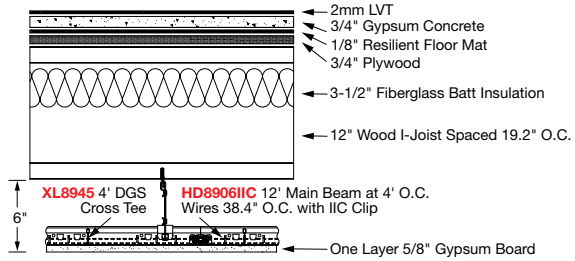
Assembly 1 – Concrete Slab Structure



Item No.	Traditional Assembly	Building Structure	IIC	Gain
HD8906IIC XL8945 IIC Clip	12' Main Beam / 4' Cross Tee IIC Clip 3-1/2" Batt Insulation 5/8" Gypsum	6" Thick Slab Concrete Base with Vinyl Sheet Flooring	66	+8

NOTE: Results are compared to Armstrong standard Drywall Grid Assembly 2

Assembly 2 – Wood I-Joist Structure



Item No.	Traditional Assembly	Building Structure	IIC	Gain
HD8906IIC XL8945 IIC Clip	12' Main Beam / 4' Cross Tee IIC Clip 3-1/2" Batt Insulation 5/8" Gypsum	2mm LVT 3/4" Gypsum Concrete 12" Wood I-Joist	55	+4

NOTE: Results are compared to RC – Deluxe

DRYWALL GRID 1-1/2" FACE CROSS TEES											
XL8965	72"	36	216	78	144	288	432				
XL8947P/XL8947PG90*	50"	36	150	56	100	200	300				
XL8945P/XL8945PG90	48"	36	144	52	96	192	288				
XL7936G90	36"	36	108	39	72	144	216				
XL8926/XL8926G90	24"	36	72	26	48	115	144				

* Dimensions are nominal.

Item No.	Length	Pcs/Ctn.	LF/Ctn.	Lbs./Ctn.
REVERSE MOLDINGS				
7857	120"	30	360	51
7858	120"	20	240	67
DRYWALL ANGLE MOLDING				
KAM-12	144"	10	120	16
KAM-10	120"	10	100	16
LAM-12	144"	20	240	39
LAM-151220E	144"	10	120	39
SIMPLECURVE®				
SC151220EQ	148"	10	124	40
SC151225	148"	10	124	26
SC21220EQ	148"	10	124	52
SC21225	148"	10	124	34

Example calculation based on 5,100 SF ceiling:

Main beam at 48" O.C.

5,100 SF × .25 = 1,275 LF

1,275 LF ÷ 144 LF/Ctn = 9 cartons needed

Cross tee at 16" O.C.

5,100 SF × .76 = 3,876 LF

3,876 LF ÷ 144 LF/Ctn = 27 cartons needed

Estimating Lineal Feet of Grid Based on Square Footage of Ceiling

O.C. Spacing of Component	Percent of Square Footage
8"	108%
12"	100%
16"	76%
20"	60%
24"	50%
30"	40%
36"	33%
48"	25%
60"	20%
